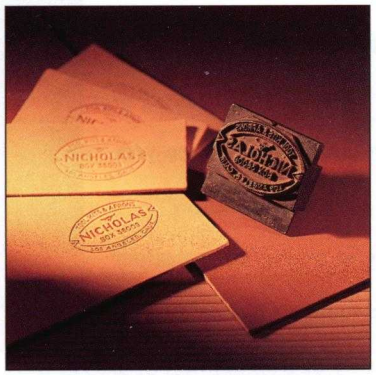
McGuire-Nicholas Company

Product Catalog

QUALITY PRODUCTS
NICHOLAS
SINCE 1932
MADE IN U.S.A.



In 1932 the Nicholas family started the McGuire-Nicholas Company in order to produce and make available to the trades work wear products of the highest possible quality and value. One of the goals of the founding fathers was to establish a new standard of product excellence in the industry through continued research, development, and service to meet consumer needs.

For over six decades that goal has been a tradition both adhered to and improved upon. Today, commitments to our early traditional values continue to be a part of our heritage.

The first Nicholas logo applied to our early products and product catalogs represented pride in craftsmanship and uncompromised quality in materials and manufacturing. The people behind the logo have always been and continue to be highly trained employees with pride and dedication to their craft. The high level of skill and workmanship required to create products with one of nature's finest materials, leather, has been passed along in our company from craftsman to craftsman. The unusual attention to detail in the manufacturing process is the result of these many years of experience.

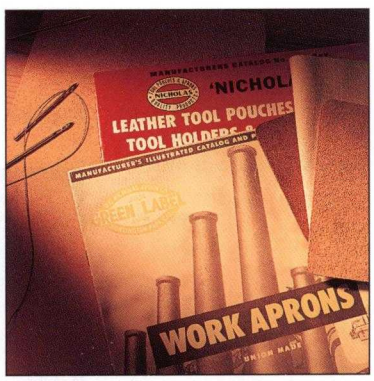
The original Nicholas vision of building a company that offered value, service, and well designed, quality products has never been compromised. In fact, many of the designs that have become industry standards were initially developed by the company's founders.

To this day, the vision, tradition, and dedication to quality and service established by the Nicholas family remain the foundation of the McGuire-Nicholas company.

A commitment to Traditional Value has always been a part of our heritage

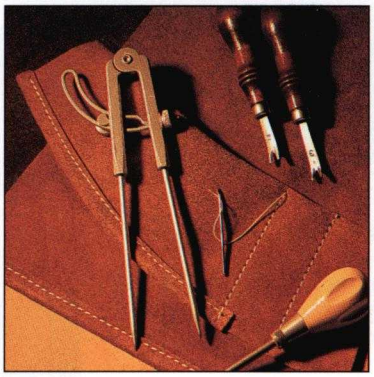
With over sixty years of history, our people are hard at work to provide the world market with "American Style" products that will assure your satisfaction.

You can be secure that when you purchase a Nicholas brand product, you are receiving a durable, well-designed, handcrafted article backed by a tradition unmatched in the industry. We will continue to offer state-of-the- art products and programs to maintain our most important asset, our satisfied customers.



Quality

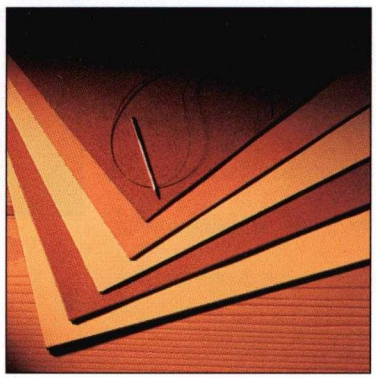
Since its founding, McGuire-Nicholas has always stood for quality and excellence. When you purchase a Nicholas brand product, you are buying a product that is the standard of quality and workmanship in the industry.



Our canvas work and shop aprons are made of 100% natural cotton duck, blue denim, or quality blends of polyester and cotton. These aprons have set the industry standard in quality for 60 years.

With careful attention **Only the Very Best** materials and hardware are used

Our concern for quality starts before the manufacturing process with research and development. The design of each product, including its unique functions and features, is specifically tailored to meet the needs of the end user. Particular attention is given to the proper material specifications for each product. For products that are manufactured from leather, only the finest hides are selected. Nature has endowed leather with very unique features. Its physical structure of many small fibers interwoven among or around each other is the secret of a leather's strength, flexibility and comfort. Hides that come from the United States have a reputation for being the best in the world. Each hide is hand cut by experienced, professional cutters to assure the end user a quality product.



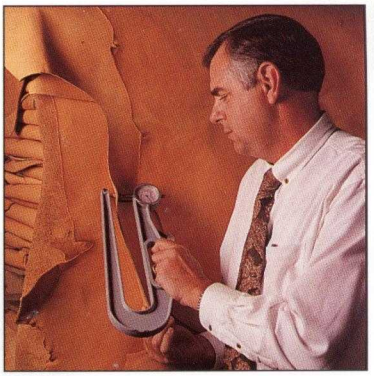
Hardware components are selected because of their quality, function, and special features including nickel-plated, rust resistant buckles, snaps, and starred rivets. The final results are products with the most advanced features, and top quality materials. We are committed to our traditional values of providing the best quality for your money. At McGuire-Nicholas, that tradition spans over 60 years.

New technology in materials is best exemplified in our Prolite™ line made of Dupont® Cordura® Plus. Our products in this line are unique in the industry due to our exclusive patented laminated feature, which results in exceptional resistance to abrasion, punctures and tears. These products also provide long life, outstanding wear and performance, as well as lightweight comfort.

Facilities

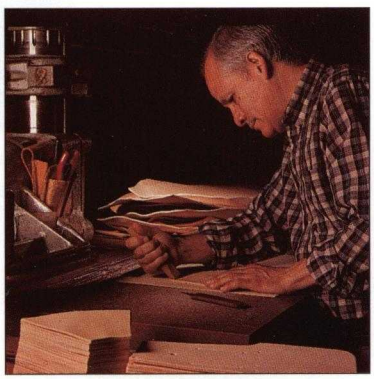
McGuire-Nicholas is recognized as a dedicated leader in the industry in delivery and service. This is possible by matching quality products with quality service. Customers can depend on us for responsive attention to every order and request. We are partners in your future, determined to deliver the finest tool accessories and work wear, priced for your profit and for your customers' satisfaction.

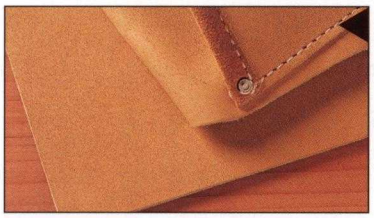
Our commitment goes throughout the company, through our own manufacturing facilities, to a comprehensive inventory selection to meet customer demand. Customer satisfaction is backed by quality production performance. At McGuire-Nicholas, we don't leave a single detail to chance. As a world class manufacturing organization, we control every element of the production process from raw material procurement through packaging and point of purchase displays. We monitor each phase of production by training all of our people to be "quality aware " during the manufacturing process to assure that our high standards are maintained at all times. To answer the needs of our customers, McGuire-Nicholas has an experienced team of specialists that can design and manufacture products to your specifications. Our "state of the art" computer system allows for your direct link with our system. This is the foundation of a true partnership.



As you review our quality products and services, remember the experienced people who are at work to assure your satisfaction. None of our products would be possible without the expertise and dedication of the true crafts people in our factory. Their unmatched skill, experience, and attention to detail are what make our product line the leader in the work wear industry.

Craftsmanship with Attention to Detail is a top priority with Nicholas employees



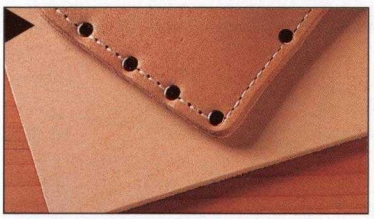


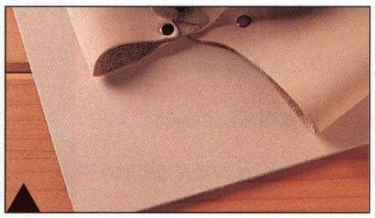
Top Grain Moccasin:
Strong and tough for long life, but soft and supple for comfort. Top grain cowhide is smooth on one side and brushed suede on the other. Excellent tensile strength and added abrasion resistance, hand selected for use in our best products. The leather is a constant uniform 5 to 5.5 ounce thickness insuring top quality.

Brown Split (Suede):
Quality cowhide used on our better grade products with a uniform thickness of 3.5 to 4 ounces. None of our leather is allowed to have cuts, soft spots, or open scars.

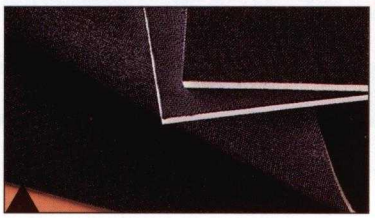
Gold Split (Suede):
Rugged cowhide for durability and lasting wear. This leather is brushed suede on both sides for physical comfort and flexibility. We use 4 to 4.5 ounce uniform thickness in all Gold Split (suede) products.

Saddle Leather:
An 8 ounce natural tanned leather that is rugged and stiff. It is for use on products that require keeping their shape for years of use. This extra strength hide has a fine grain structure that resists tearing and punctures.





Semi-Soft:
Also referred to as tool kit leather. It is both pliable and strong in a beautiful light color. The unique characteristic of the material is that it is slightly buffed to address the needs of the professional tradesman. This material has a uniform thickness of 6 to 6.5 ounces.



Prolite™:
A double laminated construction of Cordura® Plus and high density foam for added comfort and strength. These products are exceptionally resistant to abrasion, punctures and tears for long, outstanding wear and performance.

Cordura®:
A rugged nylon fabric designed by Dupont®. The material is lightweight, puncture and tear resistant, and comfortable to wear.

Canvas:
Our canvas aprons and bags are made of 100% natural cotton duck, blue denim or quality blends of polyester and cotton.

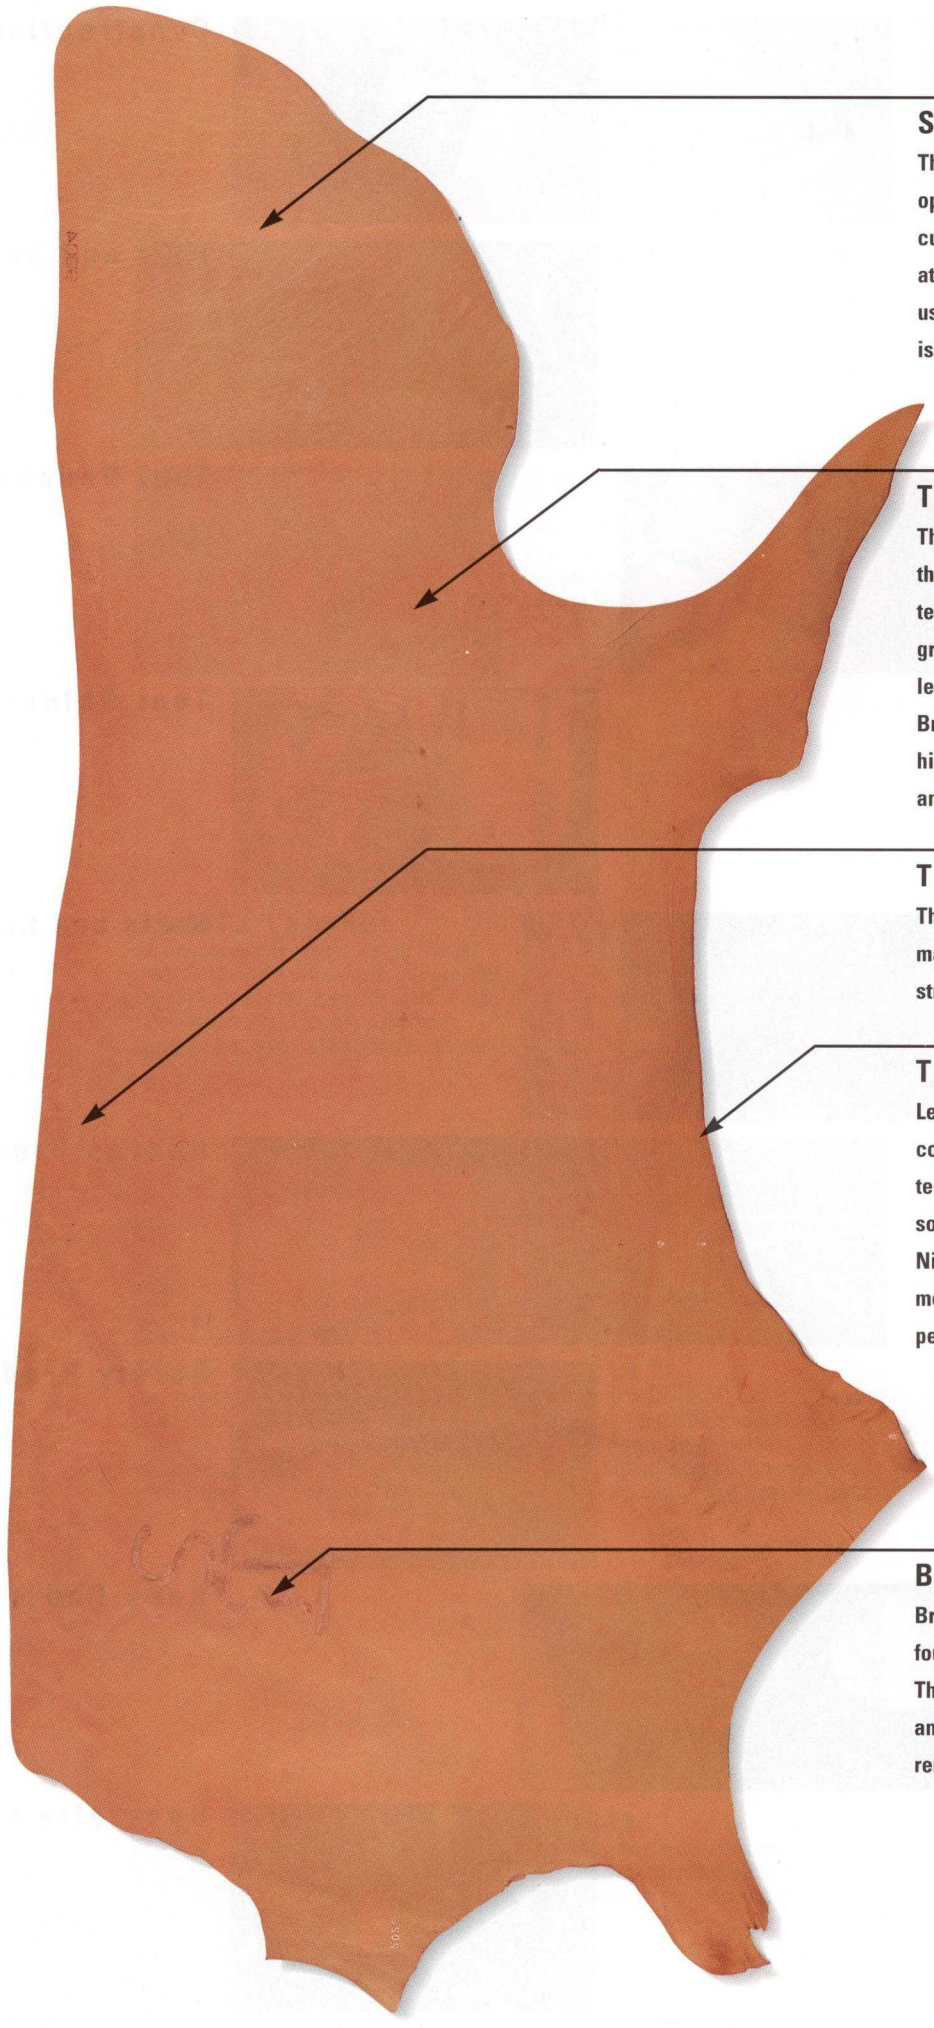
Knee Pads 45

Specialty Products 49



Shoulder Area:

This leather tends to have a loose, open grain structure making material cut from this area not as strong. If used at all, it is carefully selected to be used in the non-stress areas of a finished product..

The Side Portion

The characteristics of the leather from this portion of the hide include good tensile strength and a very fine, tight grain structure. This is the high quality leather that goes into all Nicholas Brand products in order to insure highly durable pouches, bags, aprons, and holders.

The Back Bone:

This area has a heavyweight thick material with a tight, strong grain structure.

The Belly:

Leather from this section of the hide contains loose, open grain fibers that tend to be soft, hairy, and weak in some areas. This leather is used in Nicholas Brand products only if it meets quality control and product performance requirements.

Brands and Scars:

Brands, scars, and deep cuts are not found on Nicholas Brand products. These are weak points in the leather and are therefore identified and removed during production.

Construction *Aprons*

13-Pocket, Super Capacity Medallion Construction Apron

- Full featured
- 2 large flared 10"(W) x 8"(D) main pockets
- 2 medium 8"(W) x 5"(D) front nail pockets

The Facts About Injuries in the Work Place:
In 1991, for the United States alone, the National Safety Council reported that there were over 1.8 million workers that received disabling injuries on the job.

It is the commitment of McGuire-Nicholas to continually design, develop and manufacture products to help make the work place a safer environment. To do this, McGuire-Nicholas offers the following products and their related benefits:

- **Support Belts** - Increase IAP (Inter Abdominal Pressure) helping to reduce back strain during lifting. Because of the flexible "state of the art" materials they are made of, support belts are cool and comfortable to wear yet provide firm support.

- **Lifter Belts** - Provide the firmest possible support, increasing the IAP (Inter Abdominal Pressure) to the maximum. These belts help to reduce back strain when heavier lifting is required.

- **Knee Pads** - Help to provide protection to the knee caps when they are exposed to either impact or abrasion.

- **Fall Protection** - Our Fall Protection System is designed to help the construction and roofing industry comply with the latest OSHA and ANSI standards. This includes OSHA Subpart M, 1926.502 which requires employers to provide fall protection system.

- **Wrist Support** - Supports weak wrists, controls swelling, and the thumb loop positions the wrap for firm support of the carpal area.

- **Elbow Brace** - Provides the needed support and heat retention required to facilitate healing of tennis elbow. At the same time it reduces many painful effects by limiting muscle flexation.

- **Anti-Vibration Glove** - Absorbs vibration and shock from high-frequency, high impact tools to prevent nerve damage

Prolite™ Black Support Belt
- Exclusive design removable suspender clips
- Reduces repetitive back strain
- Promotes proper lifting techniques
- Smooth glide adjustable clips on 11/2"wide suspenders
- Tapered abdominal support panels with "Coolmax" breathable liner
- Fully enclosed stainless steel stays provide flexible contoured support
